PROFESSIONAL SUMMARY

Technical Program Manager and IT Operations Leader with 15 years of experience bridging the gap between high-level engineering strategy and complex corporate production execution. Documented success leading distributed, cross-border matrixed groups to deploy scalable infrastructure frameworks and automate high-volume data telemetry pipelines. Expert in Sev-1 critical incident triage, end-to-end SDLC lifecycle optimization, and translating layered technical engineering realities into highly actionable executive roadmaps.

CORE COMPETENCIES

Program Governance: Agile Methodologies, SDLC Lifecycle Management, Cross-Functional Team Leadership, Multi-Vendor Governance, Scope Definition.

Operations & Infrastructure: Sev-1 Incident Triage, Cloud Infrastructure Optimization, SLA Management Frameworks, RACI Responsibility Modeling.

Technical Mastery: Python Architecture, Power BI Telemetry, Jira Enterprise Custom Workflows, Generative AI (RAG Mechanics), AWS Ecosystems.

PROFESSIONAL EXPERIENCE

Regional Support Manager | *Hansen Technologies*

April 2022 – June 2026

- **Matrixed Team Leadership:** Directed a fully remote, cross-border engineering organization comprising 5 to 20 technical assets distributed across up to 5 countries; successfully aligned Project Managers, Solutions Architects, and Site Reliability Engineers to maximize global delivery capabilities.
- **AI Telemetry Design:** Concepted, programmed, and launched a custom, AI-driven portfolio telemetry system from scratch, automating unstructured support log analysis to scale regional capacity without adding headcount.
- **Jira Infrastructure Governance:** Supervised platform delivery controls and deployment pipeline stability for a \$20M+ enterprise SaaS ecosystem spanning 125+ high-value corporate client accounts as the Global Jira Administrator.
- **Process Automation:** Eliminated 60 hours of redundant manual tracking overhead per month by architecting an automated Jira-to-PowerBI live data bridge, establishing a standardized corporate single source of truth for dynamic SLA parameters.
- **Operational Excellence:** Slashed global operational reporting overhead by 30% weekly via aggressive template standardization, enabling the department to consistently surpass executive gross revenue KPIs and secure clean quarterly audit clearances.

Service Delivery Manager | *Hansen Technologies*

December 2021 – April 2022

- **Crisis Infrastructure Management:** Commanded live technical crisis mitigation and incident triage environments for multi-tenant enterprise productions, utilizing Opsgenie to program alert-routing layers and establish strict resolver escalation trees.

- **Cross-Functional Alignment:** Partnered with corporate Sales, Implementation Engineering, and Product Management to author repeatable, simplified user provisioning guardrules that completely eliminated post-sale onboarding friction.
- **Runbook Engineering:** Isolated structural operational log logjam vulnerabilities, developing centralized automated troubleshooting runbooks that significantly drove down initial support touchpoint resolution delays.

Business Analyst IV - Video | *Spectrum Communications*

July 2021 – December 2021

- **Telemetry Data Aggregation:** Analyzed high-volume video platform microservice telemetry streams and system logs, transforming raw machine metrics into actionable business intelligence summaries for director-level capacity expansion planning.
- **Resource Mapping Optimization:** Formulated predictive resource modeling frameworks to optimize engineering dispatch alignment, driving down capacity constraints across primary video distribution network assets.

Manager of IT Operations & Program Manager | *LB Technologies*

May 2020 – July 2021

- **Greenfield Framework Bootstrapping:** Engineered the enterprise's foundational IT operational helpdesk and server support framework entirely from the ground up, implementing the organization's first real-time SLA tracking dashboards.
- **SDLC Optimization:** Accelerated overall time-to-market application delivery cycles by 40% through a total layout redesign of internal Jira delivery states and rigid enforcement of predictive Agile milestone parameters.
- **Product Rollout Execution:** Steered the multi-disciplinary development lifecycle and successful production rollout of the organization's initial native mobile application, yielding an immediate 10% surge in localized digital segment revenues.

Product Manager & Lead Catalog Developer | *Viasat*

November 2013 – April 2020

- **Viasat 2 Rollout Architecture:** Developed core product application architectures to facilitate the commercial deployment of next-generation residential broadband platforms, achieving a 15% year-over-year ARPU increase to \$81.99.
- **Capacity Anomaly Mitigation:** Managed the product response to a critical 15% post-launch technical capacity anomaly, spearheading the necessary technical adjustments and data tracking to stabilize the product offerings.
- **International Network Integration:** Architected internal applications to securely connect Viasat's terrestrial network fabric with the SGDC-1 satellite, successfully opening cloud-based service activation workflows across Brazil.
- **Legacy Codebase Maintenance:** Maintained and optimized custom legacy transaction codebase repositories, using SoapUI test suites to isolate and resolve multi-tier enterprise system anomalies.

TECHNICAL PROJECTS

Interactive AI Career Insight Agent

- Architected and deployed a production-ready RAG (Retrieval-Augmented Generation) autonomous agent using Python, Streamlit, LangChain, Chroma DB, and Google Gemini. Integrated Google Sheets API for silent telemetry tracking and enforced tight temperature parameters (0.1) to completely eliminate agent hallucinations. **Live application access available upon request.**

EDUCATION & CERTIFICATIONS

Professional Certifications: Anthropic AI Fluency: Framework & Foundations (July 2026) • Anthropic AI Fluency: AI Capabilities & Limitations (July 2026) • Introduction to Generative AI: Art of the Possible (Amazon Web Services).

Academic Background: Associate of Applied Science (AAS) in Computer Information Systems – Concentration in Software Development Languages & Programming (Arapahoe Community College). Undergraduate coursework successfully completed toward a Bachelor's Degree with a specialized focus in Business Intelligence & Analytical Data Systems.
